- [Adjusting AJAX Cart Pro settings](#)

Firefox user notice:

Please use different web browser to view this document.

Sorry for the inconvenience.

Magento 2 AJAX Cart Pro is a straightforward module that allows configuring custom 'add-to-cart' popups on retail website pages. Popup blocks can include product-related short descriptions, review summaries with direct links to review sections, product options to select, upsells and cross-sells (for additional promotional opportunities) and can be appended to particular product pages.

Thank you for choosing Aheadworks!

Installing AJAX Cart Pro

Command Line Installation

1. Backup your web directory and store database;

2. Download AJAX Cart Pro installation package;

3. Upload contents of the AJAX Cart Pro installation package to your store root directory;

4. Navigate to your store root folder in the SSH console of your server:

```
cd  
path_to_the_store_root_  
folder
```

run:

```
php -f bin/magento  
module:enable  
Aheadworks_Ajaxcartpro
```

then:

```
php -f bin/magento  
setup:upgrade
```

after:

```
php -f bin/magento  
setup:static-content:de  
ploy
```

5. Flush store cache; log out from the backend and log in again.

Make sure the installation is done from under the FTP administrator account. Otherwise make sure to set 775 permissions to the store root directory after the extension is deployed.

Composer Installation

1. Log in to your customer account at <https://ecommerce.aheadworks.com> and navigate to Account -> Composer access;

2. Configure your store to work with the Aheadworks composer repository:

Add composer repository to composer.json by running:

```
composer config repositories.aheadworks composer https://dist.aheadworks.com/
```

 in the Magento installation root.

Use a key pair provided as login and pass. You can optionally save them in the global composer auth file.

3. You can start using AW composer now.

For extension names, navigate to Account -> Composer access.

4. Open the root Magento directory on your server and send Composer the following command:

```
composer require <component-name>:<version>
```

Note: Use the previously copied component name and version.

5. Make sure that Composer finished the installation without errors. Flush store cache, log out and log into the backend again.

Getting around

AJAX Cart Pro extension comes ready for work right after the installation.

The extension substitutes native Magento Add to Cart button with an enhanced one. The new Add to Cart button allows adding products to the cart right from the category page. Instead of redirecting customers to the product page, AJAX Cart Pro displays a pop-up with the necessary product options: attributes and quantity.

AJAX Cart Pro works from the category, search results, product comparison page and supports native Magento cross-sells block. Additionally it allows adding products to the cart directly from the [Automatic Related Products](#) blocks by aheadWorks.

The AJAX Cart block suggests to specify the product options and offers a quick overview of the product:

- Product Image;
- Product short description;
- Review summary.

When done with the product options, customer clicks  button and the product is added to the cart, no category page reloads following.

If the product has native Magento cross-sells appointed the cross-sells block will be displayed in the confirmation pop-up of AJAX Cart Pro extension.

Display Product Short Description

Yes

[WEBSITE]

Will be displayed only for desktop devices

Display Product Reviews Summary

Yes

[WEBSITE]

Stores > Configuration > aheadWorks extensions > AJAX Cart Pro

The settings store administrator is suggested to configure are:

- Display Block For - defines for what type of products the AJAX Cart Pro block should be displayed for:
 - Products with required options only;
 - Products with any options;
 - All products.
- Display Product Short Descriptions - defines if the AJAX Cart Pro block should include a short description of the product added;
- Display Product Reviews Summary - defines if the AJAX Cart Pro block should include a review rating of the product added.

i How does the Display Block For setting work?

Depending on the setting value selected the AJAX Cart Pro block's behavior will differ depending on the product added:

- Products with required options only - if selected, the AJAX Cart Pro block will suggest specifying options for configurable products with required options or custom options set to required;
- Products with any options - if selected, the AJAX Cart Pro block will suggest specifying options for all product types that may have any options both mandatory and optional;
- All products - if selected, the AJAX Cart Pro block will suggest specifying the number of items you want to add to the cart for all products, even those without any options

If Products with required options only or Products with any options setting values are selected and customer is adding a product without any options to the cart, the AJAX Cart Pro block will display only a notification that a single item has been added to the cart.

▼ [Click to see the confirmation block...](#)

Since 1.1.0 release of AJAX Cart Pro it is possible to display the extension pop-up on the product pages upon adding product to the cart. This setting can be disabled in the Additional Settings of AJAX Cart Pro configuration page:
