Thank you for choosing Aheadworks!

Installing Advanced Reindexer

1. Unpack the provided zip file in the root folder of your Magento 2 installation.

2. From the command prompt, run the following:

```
bin/magento module:enable Neklo_Core  
bin/magento module:enable Neklo_Reindexer  
bin/magento setup:upgrade  
bin/magento setup:static-content:deploy
```

Introducing Advanced Reindexer

With the Magento 2 Advanced Reindexer extension, you can recalculate all changes made in the admin area in a few clicks. This way, the module replaces the default in-process recalculation.

Extension Logic

The module adds the new 'Update Now' option to the 'Actions' box on the 'Index Management' page. Thus, you can run reindexing whenever required the same way as with the native Magento functionality. All you need to do is to select the indexers you want to re-run, choose the 'Update Now' option, and submit the operation request. That's it! Now your webstire will work more smoothly.

Backend Configuration

Index Management

To use the extension's functionality, go to System -> Tools -> Index Management;

The screenshot shows the 'Index Management' page in the Magento backend. On the left is a vertical sidebar with navigation icons for Dashboard, Sales, Catalog, Customers, Marketing, Content, Reports, Stores, System, and Find Partners & Extensions. The main content area has a search bar, a notification bell, and a user profile 'admin'. Below this is a table with 10 records. A dropdown menu is open over the first row, showing 'Update on Save', 'Update by Schedule', and 'Update Now' (highlighted in blue). The table columns are: Description, Mode, Status, and Updated. The 'Status' column contains 'READY' or 'REINDEX REQUIRED' in green or red boxes respectively. The 'Updated' column shows timestamps.
